Sharkia Endocrinology & Diabetes Association (SHEDA)

LIVE PORTSAID

PROF. ALAA ABDEL SALAM

In collaboration with: Egyptian Thyroid Alliance (5th Annual Meeting)

Update in The Management of Endocrine Disorders

12 - 13 November, 2020

Porto Said, Port Said – Egypt

TRAb measurement in the evaluation of a pregnant woman with Graves' hyperthyroidism

1. Mothers with untreated or ATD-treated hyperthyroidism in pregnancy
2. A previous history of GD with past treatment with radioiodine or total thyroidectomy
3. A previous history of delivering an infant with hyperthyroidism
4. a known history of thyroidectomy for the treatment of hyperthyroidism in pregnancy.

A maternal TRAb serum concentration >5 IU/L (approximately 3 times the upper limit of normal for the assay) in the second and third trimester predicted neonatal hyperthyroidism with 100% sensitivity.
